CAREER OBJECTIVES

Aspiring Software Engineer seeking an entry-level role to leverage strong programming fundamentals and hands-on systems experience in building scalable software solutions.

TECHNICAL SKILLS

- **Languages:** C++, JavaScript, HTML/CSS, Python, Java
- **Frameworks & Tools:** Laravel, Bootstrap, Visual Studio, VS Code, Git, Node.js, XAMPP
- **Database Management:** MySQL, NoSQL
- **Methodologies:** Agile, RESTful API Development, CRUD-based System Design, Version Control(Git), Component-Based Architecture

SOFT SKILLS

- Strong analytical and problem-solving mindset
- Fast learner in new technologies and frameworks
- Communicative and Collaborative

CERTIFICATIONS

- **Computer System Servicing NC II**
TESDA - Mar. 2022
- **SecureBuild Extension Program (Speaker)**
Department of Industrial and Information Technology - Mar. 2026

EXPERIENCE

IT Intern

Feb. 2026 - Apr. 2026

Carmona State University - Carmona

- Managed and optimized campus web deployment using Google Sites, ensuring intuitive user navigation, consistent site architecture, and up-to-date digital resources.
- Collaborated on a joint DICT and campus initiative to deploy WiFi infrastructure, configuring local networks and security protocols like MAC filtering and LAN routing.
- Diagnosed and resolved complex hardware and software failures across multiple computer labs, establishing maintenance workflows to minimize system downtime.
- Served as a technical speaker for the "SecureBuild" extension program, delivering a live demonstration on system unit architecture, hardware integration, and assembly techniques.
- Managed a campus hardware inventory and asset tracking system to optimize resource allocation.

EDUCATION

Cavite State University - Carmona Campus

2022 - Present

Bachelor of Science in Information Technology

PROJECTS

Project and Event Management System | Full Stack Developer

- Designed and developed a web-based management system for Pag-Ibig Christian Ministries Inc. using React and Firebase (Firestore NoSQL).
- Designed core modules for event tracking, task management, and attendance recording to streamline organizational workflows.
- Implemented secure user authentication, role-based access control, and a custom domain deployment for real-world end users.

Barangay Management System | Full Stack Developer

- Developed a full-stack web application for an academic project using Laravel, PHP, and MySQL to streamline administrative processes and digitize local community services.
- Developed core modules for resident information management, document generation, and reporting to optimize data organization and retrieval.
- Implemented secure CRUD operations, input validation, and structured database relationships to ensure system reliability and accuracy.
